

Dear colleagues,

the persisting trend towards primary palmar plating on the one hand, and the increasing experience with the arthroscopic techniques on the other hand, leads to differing treatment options of distal radius fractures and their associated lesions. The different options will be discussed with our experts on the base of live transmitted surgery.

This is followed by a double workshop on cadavers at the anatomic institute of the University of Tübingen. The first 20 registered participants will be admitted. The course will deal either with open or arthroscopic surgery. Official language is English. We hope to see you in Markgröningen for what is sure to be an exciting and productive symposium.

Regards,

Prof. Dr. Max Haerle
